# Foreword

Personalised healthcare is more than just a buzzword of the moment.

It is an approach that has the potential to **radically improve outcomes for people affected by health conditions and their communities**, whilst benefiting **healthcare systems and societies** around the world.

People affected by health conditions, healthcare practitioners, regulators, policy makers and the population at large are still discovering the potential **paradigm shift** that personalised healthcare represents, and with new areas continuously emerging, personalised healthcare interventions are already **pushing beyond the limits** of some healthcare ecosystems.

As the landscape of healthcare shifts and evolves, never has it been more important to **understand, educate and advocate for personalised healthcare**, with the aim of improving individual outcomes and achieving effective and sustainable healthcare for all within the community.

**“Personalised healthcare involves the tailoring of care to an individual’s unique health needs and preferences”**

Continuous glucose monitoring technology helps people living with diabetes to self-manage the condition<sup>2</sup>

Progress in non-small cell lung cancer and biomarker research has led to a dramatic shift in how lung cancer is treated<sup>3</sup>

# Contents

1

## About this playbook

### How does this playbook work?

2

## Introduction to Personalised Healthcare Building Blocks

### Select a topic to begin

3

## Personalised Healthcare Literacy Building & Empowerment

- **Read more about...**
  - Increasing general understanding of personalised healthcare
  - Increasing understanding of specific personalised healthcare topics
  - Improving dialogues between healthcare practitioners and people affected by health conditions to enable shared decision making
  - Empowering my community of health advocates to actively contribute to steps that improve personalised healthcare

4

## Ecosystem Development & Policy

- **Read more about...**
  - Integrating views of people affected by health conditions into regulatory and policy frameworks for personalised healthcare
  - Ensuring people affected by health conditions are included in decision-making about their care
  - Enabling expert health advocates to participate in co-creating new clinical trials
  - Putting key performance indicators in place to track quality of care and outcomes for people affected by health conditions

5

## Data & Digitalisation of Healthcare

- **Read more about...**
  - Integrating views of people affected by health conditions into standards and policies for data privacy and sharing
  - Integrating views of people affected by health conditions into legal and ethical frameworks on digital health
  - Helping to define and design electronic health registries, real world data and artificial intelligence
  - Increasing understanding and use of mobile health devices and electronic monitoring to improve self-management of care

# About this playbook

This playbook is intended to help health advocates and people affected by health conditions identify action areas under the following core topics to improve understanding of, and access to, personalised healthcare options for your community:

**Personalised  
Healthcare  
Literacy Building  
& Empowerment**

**Ecosystem  
Development &  
Policy**

**Data &  
Digitalisation  
of Healthcare**

It is designed as a resource you can personalise to your needs for building literacy, supporting education and engaging in advocacy in personalised healthcare.

The playbook is a living repository of best practice examples, guidance and tools, through which health advocates can navigate, identifying the topics or action areas they feel are most important. Most examples and resources included are not specific to one health condition, however some condition-specific examples have been included as best practice case studies and will be expanded over time.

## Navigation tips

Guidance and tools continued

- If you are new to the playbook, read **pages 7 and 8** for background on the topics
- On page 9 you will see **three topics** displayed, **within which health advocates can take action** for personalised healthcare
- **Choose a topic to begin**

- **Use the ‘Read more about...’ descriptions** and choose the one that best **describes your current need or interest**
- For each description, there are 1-4 example implementation activities that you can carry out

- **Click on each implementation activity** to reveal guidance and tools, and best practice examples you can use to improve understanding of, and access to, personalised healthcare options for that topic
- Click on the links to access supporting **tools and resources**

# Personalised healthcare is constantly evolving with a growing community benefitting from, engaging in and advocating towards it

There are 50 unique elements\* needed to achieve personalised healthcare across different countries and health systems, as identified by a panel of experts. These elements form 17 Building Blocks, which span four core categories:

*\*Find out more about how these elements were identified at the [FutureProofing healthcare website](#). It includes analysis of >80 healthcare plans, interviews and validation by industry, healthcare practitioners and health advocates.*

# Three topics were identified as the most actionable for health advocates and people affected by health conditions

Find out more about how these core topics were identified on the [Personalised Healthcare Community Hub](#)

Based on the elements that make up personalised healthcare, three core topics spanning multiple Building Blocks have been identified in which health advocates can take action

### Personalised Healthcare Literacy Building & Empowerment

*Increasing understanding of what personalised healthcare is and the benefits for people affected by health conditions. Empowering health advocates to work towards personalised healthcare solutions*

### Ecosystem Development & Policy

*Embedding the views of people affected by health conditions in clinical research, care delivery plans, regulatory and public health policy frameworks, as well as pricing/reimbursement/access pathways for personalised healthcare*

### Data & Digitalisation of Healthcare

*Improving collaborations with health advocates in developing legislation, standards and guidance for health data and digital solutions to personalise health*

\*The topics, taken from the Building Blocks framework, have been explored and developed following recommendations and feedback from Roche Personalised Healthcare Global Patient Council

# Select a topic to begin

## Personalised Healthcare Literacy Building & Empowerment

*Increasing understanding of what personalised healthcare is and the benefits for people affected by health conditions. Empowering health advocates to work towards personalised healthcare solutions*

## Ecosystem Development & Policy

*Embedding views of people affected by health conditions in clinical research, care delivery plans and regulatory/health policy frameworks*

## Data & Digitalisation of Healthcare

*Improving collaborations with health advocates in developing legislation, standards and guidance for health data and digital solutions to personalise health*

Organisation input and response to the European Health Data Space 2021
  - **Position paper on data sharing in the European Union (European Patients Forum)**  
Organisation input and response to the European Data Governance Act 2021
  - **Position paper on the integration of self-management tools into routine care (American Diabetes Association)**  
Organisation position paper published in *Diabetes Care* supporting provision of diabetes self-management interventions to help people living with diabetes to make decisions about, and navigate, their own care

JUMP TO PREVIOUS OR NEXT ACTION AREA

## Data & Digitalisation of Healthcare

# Assimilating preferences of people affected by health conditions into design and definition of electronic health records, real world data and artificial intelligence

## Implementation activity

**1** Provide input on preferences and requirements of people affected by health conditions regarding:

- 2**
- Access, use, amendment of electronic health records
  - Real world data access, sharing and interoperability
  - Artificial intelligence application

### Who benefits?

- Policy makers
- Health advocates
- Healthcare practitioners
- Researchers
- People affected by health conditions

## GUIDANCE AND TOOLS

## BEST PRACTICE EXAMPLES

### Find out...

- How to conduct health research now and in the future to acquire input on digital health from people affected by health conditions
  - **How-to guide** ([Survey Monkey](#))  
Advice on conducting and getting the best participation in medical surveys
  - **Review paper** ([BioMed Central](#))  
Paper discussing how linking social media to electronic health records might allow better systematic collection of the views of people affected by health conditions as part of health services research

## BEST PRACTICE EXAMPLES

### Read...

- Examples of how to consult with the community on policy issues relating to digital health
  - **Consultation** ([European Patients Forum](#))  
Coordinated response to the European Commission's 2020 digital strategy, by the organisation on behalf of members
  - **Research** ([European Patients Forum](#))  
Survey gathering perspectives of people affected by health conditions on the use of electronic health records

## Data & Digitalisation of Healthcare

# Assimilating preferences of people affected by health conditions into design and definition of electronic health records, real world data and artificial intelligence

## Implementation activity

- 1 **Raise awareness amongst the community around the importance of data, data sharing and advocate for integration of preferences of people affected by health conditions in frameworks and policies**
- 2

### Who benefits?

- Policy makers
- Health advocates
- People affected by health conditions

## GUIDANCE AND TOOLS

## BEST PRACTICE EXAMPLES

### Find out...

- **How to communicate about health data with people with health conditions**
  - **Frequently asked questions** ([Personalised Healthcare Toolkit for the Patient Community](#))  
Frequently asked questions for people affected by health conditions, including data sharing and security in personalised healthcare
  - **Digital Literacy** ([Pharmaphorum](#))  
Article on 'the patient of the future', and how digital data collection, utilisation of real-world data and patient-centric thinking will all contribute to the rapid development of a new healthcare landscape
- **How to collect health data appropriately**
  - **How-to guide** ([Workgroup of European Cancer Patient Advocacy Networks](#))  
Information on how to generate data, including data generated via technology from people affected by health conditions
  - **Research** ([European Journal of Human Genetics](#))  
Information on what motivates research participants to share their own health data, and equally their concerns in doing so
